

## NUST STUDENTS VISIT ORANGE RIVER MINES OPERATIONS

As part of Namdeb's continuous commitment to engage various stakeholders and proudly showcase our operations, a group of students accompanied by lecturers from the Namibia University of Science and Technology, Mining and Process Engineering department visited Orange River Mines on Thursday, 30 June 2022.

The visit to the Sendelingsdrif operation was part of NUST's Mining and Process Engineering department's greater plan to visit the mining operations in the Southern part of Namibia that included Rosh Pinah Mine and Skorpion mine.

Whilst on site, the delegation was welcomed by the ORM leadership team under the leadership of Chalton Kurz and an overview presentation of Orange River Mines covering the Mining and Diamond Recovery processes was shared. This was followed by an exciting site visits to a mining site and the treatment plant.

The delegation thoroughly enjoyed the insightful and memorable visit and expressed their appreciation for the exposure and information they received.
